Secure Data Transfer

When we exchange information—like passwords, network details, or confidential documents—it's critical that it stays protected from unauthorized access. That's why we use Secure Data Transfer tools instead of email or chat. These methods encrypt your information end to end, ensuring only the intended recipients can access it. By using secure data transfer, we help safeguard your business data, maintain compliance, and reduce the risk of cyber threats during everyday communication.

Securely Send Data to TeamLogic IT Milwaukee

To securely share your information, TeamLogic IT Milwaukee will send you the prompt shown below.

The technician will control how long the request stays active—either by limiting clicks or setting a time limit.

Securely Receive Data from TeamLogic IT Milwaukee

Your technician can set limits on how many times the link can be accessed and how long it remains active to ensure your data stays secure. Please make sure to copy the information before closing the window.
